

Decompose & Waste Away Options

Our Wilderness Act-compliant toilet models provide simple, low-profile “facilities” for very remote locations.

The RMNP Wilderness is a fully above-ground toilet system. It is primarily a Decompose style toilet with waste processed on the surface of the soil within a fully enclosed bear-proof vault.

The Bugaboo Wilderness is also fully above ground. It is a Waste Away toilet system with the most compact design for extreme sites.

The Wishbone Wilderness is a variant of the outhouse building but with half-height walls and no roof. It is suitable for high-use sites and has the most privacy.

Wilderness Features

- Prefabricated and pallet packed
- Lightweight, packable on animals
- Long-lasting, durable materials
- Very high snow load ratings
- Compatible with DCV and BTW Conveyor
- No roof, limited privacy
